

## **“LOOPING” TO REDUCE ENERGY COSTS FOR WATER PRODUCTION**

We believe that the use of an “Over Unity” (OU) fuel to power the OASIS machine will permit us to create a looped, auto-running machine that some would say is not possible. They base their opinion on the belief that we are proposing a perpetual motion machine, which they say violates our present laws of physics.

### **HERE’S HOW LOOPING WORKS**

Instead of plugging the FUEL GAS PRODUCTION UNIT (FGPU) into the wall, we instead plug it into the GENERAC power generator. Yes, I know that sound crazy, but read on.

The FGPU needs a battery, the same as an automobile, to get started. You turn it on using battery power, the HHO or H<sub>2</sub> gas begins to bubble out of the water, and gas pressure begins to build up to about 20 psi. When the pressure is at that level, you turn on the GENERAC, which will start up about as fast as your car starts. The GENERAC now has electricity coming out of its POWER CONDITIONER and the AWG unit starts up.

Here is where the magic starts. The 8 kW output of the GENERAC has more than enough power to keep the FGPU running, because that FGPU unit only needs less than 1 kW to operate, leaving 7 kW to operate the AWG units. The battery stops powering the FGPU as soon as the GENERAC starts putting out power. This is just the same as your car, where the battery stops providing power as soon as the engine starts running.

Not convinced yet? Well, I don’t blame you. You would have a lot of trouble finding any information about this OU (Over Unity) business on the internet. However, Sterling Allan did put some info about it on his website at

[http://pesn.com/2010/07/13/9501671\\_Hydroxy\\_Generators\\_and\\_OU\\_Replications/](http://pesn.com/2010/07/13/9501671_Hydroxy_Generators_and_OU_Replications/)

You can find excerpts of his article on the next page. Also, I found an interesting video titled

### **THINK DIFFERENT THE POWER OF HHO SELF-RUNNING FREE ENERGY SYSTEM RUNNING A 400 WATTS LOAD**

See [http://www.youtube.com/watch?v=cMlciNOyo\\_U](http://www.youtube.com/watch?v=cMlciNOyo_U)

This video is about a shop cart that is carrying the following components:

- A GENSET, which performs the same function as our GENERAC.
- An HHO gas production unit, also called a water splitter.
- A large blue rheostat to control HHO gas production rate.
- A bubbler to prevent back flash.
- Power cords to connect the GENSET to the water splitter.
- A starter battery. Not used for that purpose, as the GENSET is started with a pull rope and another HHO gas unit is used for startup and then disconnected.

The significant features of this video are:

- The cart is continually moving to demonstrate that it is an isolated, closed system with no external power cords.
- A bright light provides load to the system. (It burns out about half way thru the video).
- This demo shows that an ICE will run on HHO, and the system can be looped. **Have you any idea what the implications of this looping effect are?** Think about it, and smile!

## 100% 'LOOPED' HYDROXY GENSET

This article by Sterling Allan gives additional support to the concept of "LOOPING".

### Hydroxy Gen and OU Replications

*Article about the many self charging battery system videos of various origins; Bedini, Tesla Switch, SEC, and others showing up all over Youtube. 100% 'Looped' Hydroxy Genset, Kapanadze OU and Self Charging Battery Systems Demoed!*

by [Charles Michael Couch](#) for *Pure Energy Systems News*

Sterling:

I apologize, the article has disappeared from my sent or draft folder, very strange. MIB I suspect. I know I wrote and I suspect I sent the article about the many self charging battery system videos of various origins; Bedini, Tesla Switch, SEC, and others showing up all over Youtube.

I've noticed too that lately most videos I want to see about these things get locked in eternal load mode. We are in a fight for our lives here. Everyone should try to locate a YouTube service email address and complain about the interference of free speech by the MIB, etc. whoever is doing this. [Editor's note: I've also seen this happen at times; but I've written it off as a temporary and random bug.]

Here is another article or a piece of the one I was talking about. I've tried to remember and add the info from the other article, combining them...

#### **100% "Looped" Hydroxy Genset, Kapanadze OU and Self Charging Battery Systems Demoed!**

by Charles Michael Couch

It was only a matter of time. Experimenters had long known that 100% Hydroxy operation of an electric generator for useful power generation was possible. The details had all been worked out. It just had not been reported and documented. Those who had done it were keeping it to themselves until recently.

Months ago, premier Free Energy/Water Car Technology documenter Patrick Kelly [reported](#) witnessing three men residing near him in the UK were running a 5 KW standard power generator and tapping 4KW for useful power. The other 1KW was being used to run the Hydroxy Electrolyzer and the pond fogger. Patrick documented how to build the system on pages 50-59 of his famous [Chapter10.pdf](#) document [1.3 Mb] (building instructions), and informed us that these men were moving on to bigger industrial generator system development and marketing, having no plans to market or produce the 5KW version.
